

XXXVII.—*Description of a new Species of Satyrid Butterfly from Costa Rica.* By H. GROSE SMITH, B.A., F.E.S., F.Z.S., &c.

Oxeoschistus cothonides.

Male.—*Upperside*. Anterior wings resemble *O. cothon*, Salvin. Posterior wings, discal area bright tawny, with a broad marginal border of dark brown, irregularly indented by the tawny area between the veins; a dark brown spot centred by a white dot situate in the tawny area between the two lowest median nervules, and two similar contiguous spots above the anal angle, as in *O. cothon*. The discal area becomes darker tawny brown towards the base and inner margin, the darker area extending transversely from the middle of the costa and crossing the cell a little beyond its middle towards the anal angle, where it merges in the dark brown marginal border. The female resembles the male.

The *underside* does not differ appreciably from *O. cothon*.

Hab. Cartago, Costa Rica.

Expanse of wings $2\frac{1}{2}$ inches.

Described from one male and two female specimens. At first I thought this insect might be the female of *O. cothon*; but there being both sexes in the collection, and possessing a female of *O. cothon* which does not differ from the male, I conclude that the very distinct colouring of the upperside of the posterior wings justifies me in describing it as distinct from *O. cothon*. The specimens were sent by Mr. Underwood with a good series of *O. cothon* from the same locality.

XXXVIII.—*On Mammals from Celebes, Borneo, and the Philippines recently received at the British Museum.* By OLDFIELD THOMAS.

THE specimens referred to in the present paper were mostly collected by Messrs. Charles and Ernest Hose in N. Celebes and by Mr. Alfred Everett at the extreme south of the same island, and both at about the same date, October to December 1895. One of the chief objects of these naturalists was to obtain for our National Museum specimens of the numerous small mammals that have been described of late years from the island of Celebes and have hitherto been unrepresented in the British Museum. This object has
